

PharmLMS - Project Functionality Report

1. Multi-tier User & Role Management

The platform supports a robust role-based access control system featuring four distinct user roles, each with its dedicated dashboard and permissions:

- **Admin:** Manages platform settings, resolves disputes, approves course content, oversees withdrawals, and handles platform analytics.
- **Mentor:** Creates and manages courses, sets availability for 1-1 advisory meetings, manages student batches, and processes withdrawals.
- **Tutor:** Acts as an associate instructor, grading assignments, tracking student progress, and answering queries.
- **Student:** Browses the catalog, purchases courses, consumes lessons, schedules meetings, and tracks progress.

2. Comprehensive Course & Curriculum Management

- **Course Creation Workflow:** Mentors can create, organize, and publish rich multi-section courses. A complete approval workflow exists where Admins review drafts before making them publicly available.
- **Lesson Variants:** Support for video embeds, rich text notes, and downloadable attachments to ensure engaging and varied learning formats.
- **Course Progression:** Automatic progress tracking at the lesson and section level, allowing students to pick up exactly where they left off.
- **Student Notes:** Integrated note-taking capability directly within the video player/lesson view, tied to timestamp offsets for video referencing.

3. Quizzes, Assignments & AI-Enhanced Assessment

- **AI-Powered Quizzes:** Integration with HuggingFace AI models allows dynamic generation of module quizzes to test user comprehension on the fly.
- **Section Quizzes:** Manually authored quizzes by Mentors/Tutors with grading configurations to ensure content mastery before proceeding.
- **Assignments & Batch Grading:** Students can be grouped into "Batches", and assignments can be scheduled and graded with rich feedback loops, mimicking a true

remote classroom.

4. Financial & Payment Operations (Paystack Integration)

- **Local Currency Purchases:** Seamless integration with Paystack for course purchases in NGN.
- **Tutor & Mentor Payouts:** Automated payout capabilities and Mentor withdrawal requests, processing net-earnings minus platform commission fees to verified local bank accounts.
- **Automated Logging:** Precise audit logs and transaction references to handle receipts and track billing safely.

5. Live Communication & Mentorship Gating

- **Mentor Availability Scheduling:** Mentors can build recurring availability schedules factoring their local timezones for advisory calls.
- **1-1 Meeting Gate:** Integrated booking logic and remote meeting (Jitsi/Video) joining gates for scheduled advising sessions between students and mentors.
- **Real-time Chat & Forums:** Platform-native Chat Threads for direct messaging and Course Forums for open Q&A and community building.

6. Gamification & Progression Mechanics

- **Badges & Achievements:** An automated rule engine to award badges for specific student interactions (e.g. course completion, perfect quiz scores).
- **Leaderboards:** Built-in competitive ranking mechanisms to increase student engagement and completion rates.

7. Automated Email & Notification Operations

- **Immediate In-App Notifications:** Users receive UI alerts for assignment grades, direct messages, meeting updates, or course approvals.
- **Email Delivery Systems:** Leveraging Resend / Nodemailer to automate transactional emails, OTP sign-ups, and key lifecycle updates smoothly to the users' inboxes.

Summary

PharmLMS offers a comprehensive, cloud-native educational backbone geared not just towards hosting videos, but facilitating a highly interactive, supervised, and monetizable mentorship

ecosystem. From content creation approvals to financial distributions, it handles the end-to-end organizational complexities securely.
